- **Matching different tastes by a diversity of beautiful façade.**

Golden doors

Types of anti-theft doors in terms of framework material

- **Wooden anti-theft doors**

The central part or the inside of these doors is made of wood; normally beech, walnut, poplar, and cherry wood as well as other types of strong and dense wood materials. Because the structure of wood is not very strong and its fire-resistance is low, one or two alloy sheets are usually utilized in wooden doors as a protector.

Golden doors

- **Metal anti-theft doors**

metal cover makes them very resistant to scratches and fire and it is a great option for factories, companies and houses.

Golden doors

● Composite anti-theft doors

Composite coating in every kinds of anti-theft door gives us a lot of options. Its composite comes in a huge diversity due to its material. This light weight coating is resistant to damp. The inner part of the composite door is covered with steel sheet, which is more impact resistant compared to other options. This cover is insulated against moisture as well as sound and it is worth mentioning that it is a good choice as apartment, bedroom and small office entrance doors.

Golden doors

● HDF anti-theft doors

These doors do not have the variety of composite doors but with using CNC machine you are able to implement various patterns. Therefore, it becomes a suitable option for the entrance door of homes and the door of the office or doctor's office.

Golden Doors HDF anti-theft doors are manufactured with high-pressure fiberboard and have a very high density.
